

# Silwet\* 625 Spray Adjuvant

MARKETING BULLETIN

SPECIALTY FLUIDS - AGRICULTURE

Silwet 625 spray adjuvant is a proprietary trisiloxane alkoxyate based wetting agent, used as a penetrant for herbicide applications (e.g. glyphosate).

Unlike traditional trisiloxane alkoxyates, which can inhibit uptake of glyphosate into grasses, Silwet 625 spray adjuvant helps overcome this problem, by enhancing performance relative to conventional tallow amine ethoxyate based spray adjuvants.

Although most trisiloxane superspreaders are excellent wetting agents (i.e. Silwet L-77\* adjuvant), it has been demonstrated that spreading is not always beneficial to herbicide uptake and performance (Lui, Z.Q.; Zabkiewicz, J.A. 1997. Proc. 50th Plant Protection Conf.: 129-133.). Figure 1 illustrates that superspreading can reduce the concentration of herbicide per unit area. In some cases this is believed to limit herbicide uptake into grasses. Evidence suggests that cuticular penetration of herbicide is favored by organosilicone sprays that do not superspread, thereby giving a higher concentration of herbicide/unit area.

Silwet 625 spray adjuvant is designed to provide the penetration properties associated with trisiloxane alkoxyates, but limits the superspreading property to achieve the optimum balance.

Figure 1: Effect of Spreading on Herbicide Distribution on the Leaf Surface

## Key Features and Typical Benefits

- Promotes rapid penetration of herbicides into grasses
- Can improve spray coverage
- Controlled spreading overcomes antagonism associated with TSAs and glyphosate on grasses
- Can reduce use levels relative to tallow amine ethoxyates
- Low use rates make Silwet 625 spray adjuvant an excellent candidate for "In-can" formulations (25 to 100 g/L formulation)

## Typical Physical Properties

Property	Result
Appearance at 25°C	Clear amber liquid
Surface Tension, mN/m (0.1 wt%) <sup>(a)</sup>	33
Viscosity (cps) <sup>(b)</sup>	144
Spread Diameter, mm (0.5 wt%) <sup>(c)</sup>	7
Cloud Point (0.1 wt %), °C	≥ 100
Flashpoint, PMCC °C (°F)	82 (180)

Typical physical properties are average data and are not to be used as or to develop specifications.

(a) Surface Tension by Wilhelmy Plate Method

(b) Brookfield Viscosity: 25 °C, Spindle LV-3, 100 rpm

(c) Deionized water, 25 °C

As a result of the unique composition of Silwet 625 spray adjuvant, improved efficacy may be achieved at use levels up to 4 times less than a conventional tallow amine ethoxylate. Figure 2 demonstrates that Silwet 625 spray adjuvant is an effective adjuvant for glyphosate in controlling barnyardgrass (*Echinochloa crus-galli*) relative to a trisiloxane alkoxyate superspreader (Silwet L-77\* adjuvant), and a tallow amine ethoxylate containing 15 EO units.

(Rain 2 HAT, Results at 14 DAT)

Note: Test data. Actual results may vary.

## Potential Applications

### In Agrochemical Formulations

Silwet 625 spray adjuvant may be used as a component in agrochemical formulations. Although organosilicone surfactants are subject to hydrolysis under acidic or basic conditions, optimum performance is achieved by buffering the formulation to pH 6.0 - 7.5. Additionally, it is recommended that Silwet 625 spray adjuvant be used at a concentration of at least 0.025% based on the final spray dilution. Depending on the overall use rate of the herbicide formulation, this will translate into a contained rate of 25 to 100 g Silwet 625 spray adjuvant/L formulation.

### As A Tank Mix Adjuvant

Silwet 625 spray adjuvant, when used as a tank-side adjuvant may improve herbicide performance. Silwet 625 spray adjuvant is most effective as a tank-side adjuvant when spray mixtures are:

- 1) within a pH range of 5-8, and
- 2) used within 24 hours of preparation.

Typically Silwet 625 spray adjuvant is used at 0.025% to 0.1% in the spray tank.

## Patent Status

Technical subject matter in this publication is described and protected by one or more of the following U.S. Patents and their foreign counterpart patents and/or patent applications: U.S. Patent No. 5,104,647. Other U.S. and foreign patents and/or patent applications not listed covering the subject matter may be relevant.

Nothing contained herein shall be construed to imply the nonexistence of any relevant patents or to constitute the permission, inducement or recommendation to practice any invention covered by any patent, without authority from the owner of the patent.

## Limitations

Customers must evaluate Momentive Performance Materials products and make their own determination as to fitness of use in their particular applications.

## Product Safety, Handling and Storage

Customers should review the latest Safety Data Sheet (SDS) and label for product safety information, safe handling instructions, personal protective equipment if necessary, emergency service contact information, and any special storage conditions required for safety. Momentive Performance Materials (MPM) maintains an around-the-clock emergency service for its products. SDS are available at [www.momentive.com](http://www.momentive.com) or, upon request, from any MPM representative.

For product storage and handling procedures to maintain the product quality within our stated specifications, please review Certificates of Analysis, which are available in the Order Center. Use of other materials in conjunction with MPM products (for example, primers) may require additional precautions. Please review and follow the safety information provided by the manufacturer of such other materials.
