## Description

Momentive Performance Materials Silquest A-174NT silane is a methacryloxy functional trimethoxy silane that finds utility in coating, composite and adhesive and sealant systems that cure via a free radical mechanism.

## Key Features and Benefits

Feature	Benefit			
Methacryloxy Functionality	<ul> <li>May be suitable for use in free radical cure adhesives and sealants based upon resin systems such as polyesters,polyurethanes, acrylics, and manythermoplastics such as PVC, polyolefins and polyurethanes.</li> </ul>			
Methoxy Silane	<ul> <li>Bonds to inorganic substrates to provide excellent wet and dry adhesion</li> <li>Fast hydrolysis rate.</li> </ul>			

May be copolymerized with vinyl acetate, vinyl chloride, acrylates, or methacrylate monomers to yield a moisture curable silylated polymer. Such polymers may be incorporated into adhesive and sealant systems to enhance adhesion to substrates such as glass, metal and some plastics. (See SPUR\* prepolymer-based technology literature for additional ideas regarding the benefits of silane crosslinked polymer chemistry).

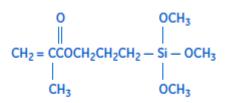

May result in the enhancement of strength performance, both initially and after wet conditioning, of glass, silica, silicate, and metal oxide filled polyester resin systems.

May improve the wet electrical performance of many mineral-filled thermoplastic materials such as crosslinked polyethylene and polyvinylchloride.
